COMMENTS

1. Mild leukocytosis with relative neutrophilia and lymphopenia. Correlate clinically; consider repeat CBC in 4 - 6 weeks if symptomatic.
2. Mildly decreased hemoglobin and hematocrit with normal indices (normocytic). Iron studies and ferritin available on request within 7 days of collection.
3. Mild elevation of AST and ALT (< 2 x ULN). Recommend review of medications and alcohol use; repeat hepatic panel in 8 - 12 weeks.
4. Fasting glucose and HbA1c are consistent with prediabetes range. Lipid profile shows atherogenic pattern (high LDL-C and TG, low HDL-C).
